## Chapter 9 - Lecture Worksheet 1

1A. LA Smog is composed of nitrogen oxide emissions. Draw Lewis structures:
$\mathbf{2 N O}(\mathrm{g})<----->\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})$

## B. This reactions is: 1. ENDOTHERMIC 2. EXOTHERMIC 3. CANNOT TELL

C. At equilibrium:

1. $\left[\mathrm{NO}_{2}\right]=\left[\mathrm{N}_{2} \mathrm{O}_{4}\right]$
2. $\left[\mathrm{NO}_{2}\right]^{2}=\left[\mathrm{N}_{2} \mathrm{O}_{4}\right]$
3. $2\left[\mathrm{NO}_{2}\right]=\left[\mathrm{N}_{2} \mathrm{O}_{4}\right]$
4. $\mathrm{k}_{\text {forward }}=\mathrm{k}_{\text {reverse }}$
5. Rate $_{\text {forward }}=$ Rate $_{\text {reverse }}$
D. Experimental data. Draw some conclusions:

| Initial | Concs (M) |
| :---: | :---: |
| $\left[\mathrm{NO}_{2}(\mathrm{~g})\right]_{0}$ | $\left[\mathrm{~N}_{2} \mathrm{O}_{4}(\mathrm{~g})\right]_{0}$ |$|$| 0.000 | 0.670 |  |
| :---: | :---: | :---: |
| 0.0500 | 0.445 |  |
| 0.0300 | 0.500 |  |
| 0.0400 | 0.600 |  |
| 0.200 | 0.00 | Final <br> $\left[\mathrm{NO}_{2}(\mathrm{~g})\right]_{\mathrm{eq}}$ |
| 0.0547 | Concs (M) <br> $\left[\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})\right]_{\mathrm{eq}}$ |  |
| 0.0457 | 0.643 |  |
| 0.0475 | 0.448 |  |
| 0.0523 | 0.491 |  |
| 0.0204 | 0.594 |  |
|  | 0.0898 |  |

## Ratios of Equilibrium Concentrations $\left(\mathbf{2 5}^{\mathbf{0}} \mathrm{C}\right)$

| $\frac{\left[\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})\right]}{\left[\mathrm{NO}_{2}(\mathrm{~g})\right]}$ |
| :---: |
| 11.76 |
| 9.80 |
| 10.34 |
| 11.36 |
| 4.4 |

E. Why does this work ? Assume a 1 step mechanism and find the ratio ( $\left.\mathbf{k}_{\text {forward }} / \mathbf{k}_{\text {reverse }}\right)$
2. Write equilibrium constant expression for:

For reaction A at $25^{0} \mathrm{C}, \mathbf{K}_{\mathbf{e q}}=\mathbf{3 . 5} \times 1 \mathbf{1 0}^{\mathbf{8}}$.
We can say that at equilibrium:

1. There is a lot of $\mathrm{NH}_{3}$ relative to $\mathrm{N}_{2}$ and $\mathrm{H}_{2}$
2. There is a lot of $\mathrm{N}_{2}$ relative to $\mathrm{NH}_{3}$ and $\mathrm{H}_{2}$
3. There is a lot of $\mathrm{H}_{2}$ relative to $\mathrm{NH}_{3}$ and $\mathrm{N}_{2}$
4. There is about the same amount of $\mathrm{NH}_{3}$ as
$\mathrm{N}_{2}$ and $\mathrm{H}_{2}$
5. Cannot tell from the information given.
6. Write equilibrium constant expression for: $\quad$ For reaction $B$ at $25^{\circ} \mathrm{C}, \mathbf{K}_{\mathbf{e q}}=\mathbf{9 . 8} \times 10^{-9}$. $\mathbf{C a C O}_{\mathbf{3}}(\mathbf{s})<---->\mathbf{C a}^{\mathbf{2 +}} \mathbf{( a q )}+\mathbf{C O}_{3}{ }^{\mathbf{2 -}} \mathbf{( a q )}$ We can say that:
7. $\mathrm{CaCO}_{3}(\mathrm{~s})$ is very soluble.
8. $\mathrm{CaCO}_{3}(\mathrm{~s})$ is not very soluble.
9. Cannot tell from the information given.
10. Write the equilibrium constant expression for: $\mathbf{2 N H}_{\mathbf{3}}(\mathbf{g})<----->\mathbf{N}_{\mathbf{2}}(\mathbf{g})+\mathbf{3 H}_{\mathbf{2}}(\mathbf{g})$ How is this related to the expression for K in question 2 above ?
11. Write the equilibrium constant expression for: $1 / 2 \mathbf{N}_{\mathbf{2}}(\mathrm{g})+\mathbf{3 / 2} \mathbf{H}_{\mathbf{2}}(\mathrm{g})<----->\mathbf{N H}_{\mathbf{3}}(\mathrm{g})$ How is this related to the expression for K in question $\mathbf{2}$ above ?
12. Conclusions?

| PRS Answers |  |
| :--- | :--- |
| $1 . \mathrm{K}=\mathrm{K}_{\mathrm{A}}$ | $6 . \mathrm{K}=\left(\mathrm{K}_{\mathrm{A}}\right)^{2}$ |
| $2 . \mathrm{K}=\left(1 / \mathrm{K}_{\mathrm{A}}\right)$ | $7 . \mathrm{K}=\left(1 / \mathrm{K}_{\mathrm{A}}\right)^{1 / 2}$ |
| $3 . \mathrm{K}=2\left(1 / \mathrm{K}_{\mathrm{A}}\right)$ | 8. $\mathrm{K}=(1 / 2)\left(1 / \mathrm{K}_{\mathrm{A}}\right)^{1 / 2}$ |
| $4 . \mathrm{K}=2 \mathrm{~K}_{\mathrm{A}}$ | 9. $\mathrm{K}=\left(\mathrm{K}_{\mathrm{A}}\right)^{1 / 2}$ |
| $5 . \mathrm{K}=\left(1 / \mathrm{K}_{\mathrm{A}}\right)^{2}$ |  |
