$\qquad$

Final Exam
This exam is composed of $\mathbf{5 0}$ questions.
As discussed in the course syllabus, honesty and integrity are absolute essentials for this class. In fairness to others, dishonest behavior will be dealt with to the full extent of University regulations.
I hereby state that all answers on this exam are my own and that I have neither gained unfairly from others nor have I assisted others in obtaining an unfair advantage on this exam.

Signature

$\qquad$

Adenine

Guanine

Thymine

Cytidine

1. Which molecule below has the lowest boiling point?

1) octane
2) hexane
3) 2,3-dimethylbutane
A

B

C

2. Which two molecules above are constitutional isomers?
1) $A$ and $D$
2) C and D
3) B and C
4) A and B
5) none are constitutional isomers of each other
3. The molecule at right is

1) a cis isomer
2) a trans isomer
3) not an isomer
4. In the molecule at right, the ideal bond angle around the 1-carbon is:
1) $120^{\circ}$
2) $109^{\circ}$
3) $90^{\circ}$
4) $180^{\circ}$

5. The addition reaction product of the reaction of HCl and 3-hexene is:
1) 1-dodecene
2) 6-dodecane
3) 1-chlorohexane
4) 3-chlorohexane
5) 3,4-dichlorohexane
6. Which molecule below has the highest boiling point?

1) butane
2) 1-propanol
7. Which is the stronger acid?
1) cyclohexanol
2) phenol
3) they are the same
8. In the molecule at right, which atom is a chiral center?
1) $A$
2) $B$
3) C
4) D
5) E

9. How many stereoisomers are possible for the molecule at right?
1) 0
2) 1
3) 4
4) 6
5) 8

10. Which is the strongest base?
1) 

2)

3)

4)

11. Ketones are reduced by $\mathrm{H}_{2}$ and an appropriate catalyst to

1) esters
2) alcohols
3) carboxylic acids
4) the parent alkanes
5) ketones are not readily reduced
12. The molecules shown at right represent
1) Tautomers - two ways of looking at the same molecule

2) Tautomers - two inteconverting, but different molecules
3) Resonance Forms - two ways of looking at the same molecule
4) Resonance Forms - two interconverting, but different molecules
13. The reaction of butanoic acid and $\mathrm{LiAlH}_{4}$ in water yields:
1) $\mathrm{CO}_{2}$ and propanal
2) $\mathrm{CO}_{2}$ and propanoic acid
3) water and butanol
4) water and butanal
5) nothing. No reaction occurs.
14. From what parent molecules can the molecule at right be synthesized?

1) toluene and methyl acetate
2) benzoic acid and methanol
3) benzene and acetic acid
4) acetic acid and phenol
15. Heating the molecule at right yields which products?
1) propanoic acid and carbon dioxide

2) acetic acid and propanoic acid
3) butanoic anhydride
4) 2-butanone and carbon dioxide
5) no reaction occurs
$\qquad$
16. The products of the following reaction are

1) 

2)

3)

4)

5) None of the above
17. Hydrolysis of propyl anhydride is represented by which reaction below?
1)

2)

4)

18. In the conversion of ATP to ADP, which is most likely?

1) water attacks the $\alpha$ phosphate
2) water attacks the $\gamma$ phosphate
3) the sugar 2 ' OH attacks the $\gamma$ phosphate

4) the sugar $2^{\prime} \mathrm{OH}$ attacks the $\alpha$ phosphate
5) oxygen on the $\gamma$ phosphate attacks the $\alpha$ phosphate
19. Compare the linear and circular forms of glucose. Carbon 5 ' in the linear form corresponds to which carbon in the circular form?
1) $A$
2) $B$
3) C
4) D

D-Glucose

20. The geometry at the 3 ' carbon in the linear form of glucose is:

1) square planar
2) tetrahedral
3) trigonal planar
21. Glycolipids contain what characteristic head group?
1) sphingosines
2) carbohydrates
3) cholesterol
4) steroids
5) phosphates
22. Triglycerides are based on which chemical framework?
1) 

2) OH
3)

23. In metabolism, CoA-SH usually reacts directly with

1) alcohols
2) esters
3) anhydrides
4) carboxylic acids
5) water
24. In the Citric Acid cycle, succinate reacts with FAD. In this reaction, succinate:
1) isomerizes
2) is phosphorylated

3 ) is dephosphorylated
4) is reduced
5) is oxidized
25. In respiration, a $\mathrm{H}^{+}$gradient across the mitochondrial membrane is used to drive the following unfavorable reaction:

1) $\mathrm{ADP}+\mathrm{P}_{\mathrm{i}} \rightarrow \mathrm{ATP}$
2) $\mathrm{ATP} \rightarrow \mathrm{ADP}+\mathrm{P}_{\mathrm{i}}$
3) $\mathrm{NAD}^{+} \rightarrow \mathrm{NADH}+\mathrm{H}^{+}$
4) $\mathrm{NADH}+\mathrm{H}^{+} \rightarrow \mathrm{NAD}^{+}$
5) $\beta$ oxidation of fatty acids
26. In one of the reactions of glycolysis, glucose is phosphorylated:

Which common metabolite is another reactant in this process?

1) NADH
2) Coenzyme $A$
3) ATP
4) FAD
5) Pyruvate
27. In one of the reactions of glycolysis, pyruvate is converted to lactate:

Which common metabolite is another reactant in this process?

1) Coenzyme $A$
2) NADH
3) FAD
4) ATP
5) ACP
28. The reactions of gluconeogenesis are simply the reactions of glycolysis run in reverse
1) True
2) False
29. In the synthesis of fats, fatty acids are activated by reaction with:
1) NADH
2) Coenzyme $A$
3) FAD
4) ATP
5) Pyruvate
30. In the amino acid linkage shown at right, which bond has a high energy cost for rotation?
1) 1
2) 2
3) 3
4) 4

31. Which of the following amino acids is most likely to be found in the interior of a protein?
1) Ile
2) Lys
3) Asn
4) Arg
5) Ser
32. Which of the following amino acids is best at forming two simultaneous hydrogen bonds with another functional group in a protein or nucleic acid?
1) Ile
2) Lys
3) Asn
4) Ser
5) Thr
33. Which interaction below involves hydrogen bonds between amino acids separated by less than 5 residues in primary sequence?
1) disulfide linkages
2) $\beta$-sheets
3) $\alpha$-helices
4) electrostatics
34. A stretch of a protein contains the sequence-Leu-Asn-Ile-Arg-Val-Asp-Ile-Lys-Val-

This stretch most likely lies in

1) in an $\alpha$-helix in the interior of the folded protein

2 ) in an $\alpha$-helix on the surface of the folded protein
3 ) in a $\beta$-sheet in the interior of the folded protein
$4)$ in a $\beta$-sheet on the surface of the folded protein
5 ) in a turn buried in the interior of the folded protein
35. An enzyme can increase the rate of a reaction by

1) raising the energy of the reactants
2) lowering the energy of the products
3) lowering the energy of the transition state
4) raising the temperature of the reactants
5) increasing homeopathic vibrations

36. In the reaction below, "feeback control" refers to:

$$
\mathrm{A} \xrightarrow{\mathrm{E}_{1}} \mathrm{~B} \xrightarrow{\mathrm{E}_{2}} \mathrm{C} \xrightarrow{\mathrm{E}_{3}} \mathrm{D}
$$

1) Enzyme $E_{3}$ binds to reactant $A$, preventing its reaction with enzyme $E_{1}$
2) Enzyme $E_{3}$ is redirected to generate product $A$, rather than product $D$
3) Enzyme $E_{3}$ binds to and inhibits enzyme $E_{1}$
4) Binding of intermediate $B$ to enzyme $E_{3}$ inhibits the enzyme
5) Binding of product $D$ to enzyme $E_{1}$ inhibits the enzyme
37. Which class of enzyme most likely utilizes $\mathrm{NAD}^{+}$as a reactant?
1) transferase
2 ) dehydrogenase
3 ) isomerse
2) hydrolase
3) ligase
38. Allostery refers to
1) modifications such as phosphorylation, that modulate enzyme activity
2) the biosynthesis of different forms of an enzyme in different tissues
3) induced fit binding of a substrate in an active site
4) binding of a regulatory molecule at an enzyme site different from the active site
5) a change in structure of the active site to better fit the bound substrate
39. Which amino acid side chain is most likely phosphorylated by ATP by the kinase enzyme? (note you are not expected to know this, but to deduce it from what you've learned in this course)
1) Gly
2) Arg
3) Leu
4) Ala
5) Tyr
40. Which statement below is most correct?
1) Chemical messengers are cells that bind to other cells, injecting chemical signals
2) Chemical messengers are ligands that bind to protein receptors on cell membranes
3) Chemical messengers penetrate cell membranes to bind to proteins inside the cell
4) Chemical messengers react with other messengers to trigger changes in the cell
5) Chemical messengers ride bicycles to deliver key messages
$\qquad$
41. In the cytidine base at right, which most completely lists the H -bond donors?
1) B , C and D
2) A and B
3) A and E
4) D and E
5) D, C, and E

42. DNA and RNA can be best characterized as
1) nonpolar
2) polar
3) charged
4) all of the above
43. DNA and RNA polymerase active sites distinguish Watson-Crick base pairs from other base pairs by
1) interactions with the sugar and phosphate backbone
2) interactions in the major groove
3) interactions in the minor groove
4) the intrinsic strength of the base pair
5) channeling with the spirit of Francis Crick
44. Which is more likely to have enzyme-like activity?
1) DNA
2) RNA
3) they have the same likelihood

45. Which base pair above is not a Watson-Crick pair?
1) A
2) $B$
3) C
46. Which amino acid is best for recognizing an AT base pair via major groove interactions?
1) Gln
2) Ser
3) Lys
4) Arg
5) Pro
47. In eukaryotes, genes contain
1) introns and ribozymes
2) introns and exons
3) exons and gluons
4) introns and promoters
5) klingons and muggles
48. Water is a unique molecule in that it

1 ) is very low in mass
2) has polar and nonpolar parts

3 ) is small and can simultaneously accept 2 and donate 2 H -bonds
4) can solubilize anything
5) can be mass-marketed
-49. Which arrow below represents the nucleophilic attack that would be required in formation of the GA dinucleotide?

50. What is the course number of this class?

1) 110
2) 111
3) 250
4) 728
